Internet Policing

 -3
 
 2
  3
  -3

Fed up with online harassment, the consortium initiates the Online Investigation Squad, also known as the Trollhunters to police cyberspace.

Paid for Social

 4
  -2
  2
 
 -3

With generous backing a social network long deceased is reborn as OurSpace, which promises not to harvest your data - in exchange for a small fee.

Open Data

 -2
  3
 
 3

Public bodies are pushed to release their data for use by researchers, citizens and the private sectors. Anonymised of course, as much as possible.

DeepBake

 4
  2
 

The AI division of the GAFA Cooperation enters a popular TV cooking competition, with its 3 loveable human handlers.

Data Portability

 -2
  1
 
 3

A 'right to data portability', allowing you to take your social media data to another provider.

Digital Startups

 -2
 

 2

A powerful new Startup Bill creates a wave of new digital entrepreneurs, generating lots of new apps and services.

Mesh Mania

 -2
  2

With Consortium support, community mesh networks, like Guifi.net, explode in popularity - bypassing much existing infrastructure and reducing barriers to access.

Never walk alone

Created by Yousuf Karam from Neuron Project

Free stepcounters and priority access to medical care - for those who agree to be tracked and keep moving.

-2

2

-1

2

-3

Crippled Crypto

Created by M.K. Nasiruddin from Neuron Project

The government outlaws 'military-grade' cryptography in an effort to improve intelligence-gathering. Chaos quickly ensues as banks and payment systems are compromised.

-1

2

-3

2

-3

Bullshit Meter

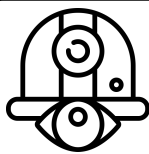

Created by Ikon Island from Neuron Project

A 'bullshit' meter that displays the likelihood of something being fake news on a visual meter.

2

-2

Smart CCTV

Created by Ben Davis from Neuron Project

CCTV and AI make for a potent combination, making it easier to surveil just about everything and everyone.

-2

3

4

1

Uploadfilter

Created by Sebastian from Neuron Project

Fake news, copyright violations, stolen data, nothing escapes the upload filter. Of course there are occasional false positives as well...

-2

3

-4

Deliveroo for Drugs

Created by Ws All Design from Neuron Project

A new service, which brings prescription and over the counter drugs straight to your home. SO useful!

1

2

2

Smart ID

Created by author 8 from Neuron Project

Smart ID which allows users to only reveal what's necessary - age for buying alcohol, address for local services, tax number for work. Except of course to those running that database.

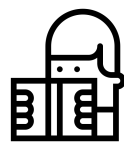

4

2

3

Tensorflow School Kids

Created by Brian van Rijn from Neuron Project

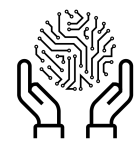

Never too early to get kids into AI. All possible thanks to our generous corporate sponsor!

5

2

2

Law against AI Bias

Created by smarttaggart from Neuron Project

Datasets and algorithms become more representative and fair. It's a blessing for everyone really, especially the big firms who can afford to retrain their models on rich data.

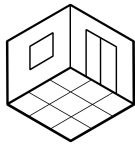

2

2

1

3

Created by Munch from Noun Project

Whiteroom Experience

4

-1

-5

Rolling out the online privacy experience across Europe really made people conscious of the need for privacy. It was not great for overall trust in the internet though.

Created by Shorofyeh from Noun Project

Shoulders of giants

-1

1

2

How nice that some large tech firms have agreed to mentor promising start-ups, that should really help the newcomers. And they have already picked up some really cool tricks!

Created by corpus delicti from Noun Project

Push out Cash

-1

3

2

Cash is over, well almost. This combination of law changes, technical fixes and public campaigns make almost everything cashless and digital. Very handy!

Created by Artem Koryazin from Noun Project

Smart Streetlights

4

Roll out across 25 major cities to save power and increase security. Motion sensors are too unreliable, so they will be triggered by phones. But everyone has one of those right?

Created by Jessica Gutches from Noun Project

Citizen Sensors

-2

2

-1

Encourage locals to install and set up sensors for environmental data like pollution or noise. Open standards mean data remains secure and useable for all.

Created by David from Noun Project

Ethical Phones

3

2

-2

Tough rules against child labour and working conditions in mines and factories for smartphones - does raise prices though, locking out poorer consumers.

Created by Gregor Crenar from Noun Project

Security Liabilities Rules

4

3

1

Unsecure connected devices cause damage. Now makers need to pay! Prices rise, large firms are most able to absorb the cost, but worth it, right?

Created by Andrius Kimas from Noun Project

DigiPatrol

-1

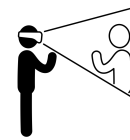

2

-2

Police patrols are replaced by sensors, cameras and surveillance drones, which gives adopting cities much better visibility and saves officers time to respond to actual crime.

Created by Kishida from Noun Project

ThirdLife VR

-2

3

Support for fully immersive VR has the potential of allowing everyone to experience luxury, travel and riches. Real life for most pales in comparison!

Created by Andrew Cameron
from Nout Project

Print everything!

This can make 3D printing widespread, giving everyone access to cheap, locally printed consumer products and spawning an unruly market in schematics.

-2

-4

2

Created by Indray
from Nout Project

Data Pathways

New legislation requires all data gatherers to make instantly available who data is shared with in real time, showing people the real extent of data collected.

3

3

2

1

Created by Anton Scherhag
from Nout Project

Hands off!

A powerful joint commitment to decrease surveillance without explicit consent by private and public actors.

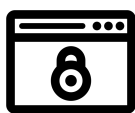

4

2

2

-3

Created by Remyway icons
from Nout Project

PrivTech

Funding package for startups who demonstrate that privacy is baked into their code.

4

-2

2

2

-2

Created by Dinger Creator
from Nout Project

Search and Destroy

Tired of fake news, this measure will use sophisticated software and state power to track and prosecute all who create or fake news, punishing both users and platforms.

-2

2

2

2

2

Created by Dinger Creator
from Nout Project

Encryption boost

Public campaign to spread the use of encrypted communication using open source means.

5

-2

2

-3

2

Created by Made
from Nout Project

Data Breach Fines

Hand out unlimited fines for data breaches, based on the value of data stolen and likely damage.

5

1

3

2

Created by dCura
from Nout Project

Skills matching

Roll out a new methodology of showing individuals the skills required in their (prospective) career by NESTA drawing on online job ads for better matching.

-2

2

3

3

Created by Taktik Design
from Nout Project

Labour data harvest

Heavily harvest data about the labour market from job ads, social networks and other sources to improve employment.

-2

2

2

2

Created by Luis Prieto
from Neuron Project

Privacy at work

Rules to stop employers from monitoring personal communications like email or social media at work and "unreasonable" data collection from tracking devices.

4

2

1

Created by Arthur Blain
from Neuron Project

Right to switch off

EU wide right to ignore emails out of defined work ours, leave connected devices and unplug mentally.

3

1

4

Created by Nicolas Vicent
from Neuron Project

Flexible Work

Businesses to allow shifting hours, work from home and supplying technology to make it easier and convenient. Easiest of course for larger firms.

-1

3

4

Created by Daniel Prossin
from Neuron Project

Public Transport WiFi

Massive effort to put Wifi on every public transport in the 50 biggest cities in Europe. Only possible thanks to our generous industry partners.

3

1

2

Created by Kevin Augustine LO
from Neuron Project

Government EdTech

To protect children from data harvesting and add profiling, whilst preparing them for a tech heavy world, the government provides tablets and other devices through schools.

-2

1

1

Created by Kishida
from Neuron Project

AI Health Service

Partnership to improve diagnostics by analysing data from all patients across the board, anonymised and aggregated.

-2

4

2

Created by Hish Bashier
from Neuron Project

Social Network Age Limit

Push to raise the limit of social networks to 16 and make platforms enforce it rigourously.

3

1

2

Created by monik
from Neuron Project

On-Demand Life

A mobile app allows everyone can order a taxi, get food and groceries delivered, book an in-home beauty salon service, all from one app. Oh, they have a digital wallet too!

3

2

4

Created by JAR STUDIO
from Neuron Project

Big Digital Money

A tech startup unicorn goes on a "shopping spree" for small fintech startups ranging from microlending, payment gateways, and digital wallets.

-1

4

-2

Data Tax

Created by I. Pello Varamagall
from Neuron Project

Complex algorithms now allows to tax the collection of data by for profit companies and collect revenue. Makes collecting data expensive - and those who hold it, rich.

3

1

2

#noshare

Created by Cecilia MENANT
from Neuron Project

Public awareness campaign against handing private data to companies, big players and new entrants alike.

4

2

2

InstaBaby

Created by Hassan alshar
from Neuron Project

Birth certificates are phased out as almost 100% of the population upload photos of their newborns. Instead, councils crawl through social media data to register births.

-1

1

2

1

VR Parole

Created by Rishabh
from Neuron Project

The government in collaboration with a VR company rolls out nationwide programme to use VR to help prisoners with reintegrating to society.

-1

4

Anticipatory Regulation

Created by Dorcas
from Neuron Project

New approach to legislate for new technology and creating legal frameworks which enable new firms to innovate whilst maintaining safeguards.

-1

2

2

Video Game against Trauma

Created by Dorcas Blumaglov
from Neuron Project

Digital application to help people process trauma and reduce the strength of lasting harm on their lives.

3

2

Blockchain Insurance

Created by Rishabh
from Neuron Project

Smart insurance contracts on the blockchain self-execute when specific conditions are met, making it easier to insure risks.
